

17 October 2017 – Updates from the last meeting

`Science in a Digital World` - NLeSC conference - Amsterdam, 12/10/2017

During the conference some people found our project interesting listening and participating actively to our interactive description of its main concepts. Few people were not uniquely interested on a presentation and introduction of our project, and they asked more detailed and advanced questions (e.g. how we would like to handle the issue of integrating the visual storytelling concept with big data visualizations) to which I preferred to answer vaguely.

I exchanged my contact information with most of the audience for possible future collaborations, for keeping them updated about our project and for being informed about future related conferences (e.g. `Narrative Matters`, by the University of Twente).

Thus, the poster design was successful and it positively puzzled many people at first glance.

Finally, thanks also to the plenary sessions, the Brain, Cognitive and Behavior sessions (in the morning) and the Machine Learning sessions (in the afternoon), I came across on some concepts related to our project:

- The role of Human-Centered Data Science
- Hyperauthorship
- Using a QR code/buttons for recognizing analyses/users/metadata involved in the visual stories
- Machine Learning + Interactive Visualization = Understanding
- Workflow in Healthcare:
 - Population-based studies → Clinical studies → Diagnosis
 - Baseline scan → Follow-up scan → Comparison/Matching (based on statistics)
 - Relating individual diagnosis to reference values
- Use of user-interest model (from individual data)
- Bias in automated decision making
- Need of understanding the system and building the trust (the role of visual storytellers)
- Using zoomed areas as marks during the annotation phase
- Creating new branches not only per different users but also when focusing on zoomed areas

Overall, the conference was useful since I gained more experience and confidence, meeting researchers and PhD students working on Science.

Learning activities

- Start to teach (75% done)
- English course (75% done)
- Scientific Integrity (50% done, essay to submit)
- Dutch course (start on November 1)
- Mastering your PhD
- Deep Learning course (October 31)

Teaching activities

- Introduction to Computing Science (70% done)

Other activities

- PhD day 2017 (attended)
- Introductory event (November 11)
- PhD day 2018 main board member (about one meeting per month)

Future conferences

- ICIDS2017, Madeira, 14-17 November 2017 (to attend)
- PacificVIS 2018, Kobe, 10-13 April 2018 (participation in the visual storytelling contest, deadline: January 21, 2018)*

<http://itolab.is.ocha.ac.jp/pvis2018/>

- Narrative Matters, University of Twente, 2-5 July 2018 (abstract to submit by November 1 to conduct a workshop about visual storytelling)**

<https://www.utwente.nl/en/bms/narrativematters2018/>

- Collecting, Annotating and Analyzing video data, workshop by Lorentz Center, Oct 30 – Nov 3 (should I attend it?!)

<http://www.lorentzcenter.nl/lc/web/2017/926/info.php3?wsid=926&venue=Snellius>

* We aim to submit a prototype (a website or a video) of a part of the final idea of VSBID. Starting from the CLUE model and Yun`s interface, we can create a little tool which transforms the 3D images of the exploration stage to 2.5D images for allowing authoring. (to further develop)

** The aims of our workshop are to give a background about visual storytelling to the audience, to show an example of a data-driven visual story and to let the audience interacting with us and the data actively. After a presentation of the visual storytelling concepts, a discussion regarding effective visual storytelling designs and its role in different scientific (and not) fields.

About the literature review

I keep reading new papers weekly (especially after the VIS2017) and my literature review draft has been extended relevantly.

Still to do

- Report about the Caleydo application experiment
- The final version of the literature review
- Uploading everything into the server
